

PRESS RELEASE

**NEW 66 KV SUBMARINE CABLE LINKS FOR THE GODE WIND 3 AND BORKUM
RIFFGRUND 3 WIND FARMS IN THE GERMAN NORTH SEA****MORE THAN 150 KM OF CABLES WILL PROVIDE GREEN AND CLEAN ENERGY TO 1.2
MILLION GERMAN HOUSEHOLDS**

Milan, 28th July 2021. Prysmian Group, world leader in the energy and telecom cable systems industry, has been awarded a contract worth above €60 million by Ørsted – the world’s largest offshore wind farm developer— for the design, supply, termination and testing of inter-array submarine cable systems for the Gode Wind 3 and Borkum Riffgrund 3 offshore wind farms. The completion of both projects is expected by 2024.

The Gode Wind 3 and Borkum Riffgrund 3 offshore wind farms will be located approximately 60 km from each other in the German North Sea and will be built simultaneously. Prysmian Group will provide inter-array cable systems for a total of more than 150km of 66 kV XLPE–insulated cables that will connect the wind turbines of Gode Wind 3 to an offshore substation platform and Borkum Riffgrund 3 to an Offshore Converter Station where the voltage will be increased and converted for onward transmission to the German mainland, with an overall combined capacity of more than 1,100 MW. Once operational, the two wind farms will be capable of supplying around 1.2 million German households.

“We are proud to support Ørsted in these two important projects providing our state-of-the-art, high-performance 66 kV cable systems for inter-array networks. This agreement further confirms Ørsted’s trust in Prysmian’s capability and expertise, as well as in its role as a reliable provider of submarine cable systems. In fact, Ørsted has already awarded Prysmian a contract for the Hornsea 2 project, one of the biggest offshore wind farms that will be able to supply well over 1.3 million homes with green, renewable electricity,” stated Hakan Ozmen, EVP Projects, Prysmian Group.

The cables for the Gode Wind 3 and Borkum Riffgrund 3 projects will be produced in Montereau and Gron (France), as well as in Nordenham (Germany), one of the Group’s three centres of excellence for submarine cable production (along with the plants in Arco Felice, Italy, and Pikkala, Finland).

Prysmian has a strong presence in Northern Europe, and particularly in the entire Northern Sea region. In fact, the Group has been playing a leading role in the development of offshore wind farms in the continent.

These projects are an important addition to Prysmian’s growing portfolio of 66 kV inter-array cable systems, alongside projects such as Borssele III & IV, Hornsea 2, Hollandse Kust Zuid 3 and 4 and Provence Grand Large in Europe, and Empire Wind in the US.

Prysmian Group

Prysmian Group is world leader in the energy and telecom cable systems industry. With almost 140 years of experience, sales of over €10 billion, about 28,000 employees in over 50 countries and 104 plants, the Group is strongly positioned in high-tech markets and offers the widest possible range of products, services, technologies and know-how. It operates in the businesses of underground and submarine cables and systems for power transmission and distribution, of special cables for applications in many different industries and of medium and low voltage cables for the construction and infrastructure sectors. For the telecommunications industry, the Group manufactures cables and accessories for voice, video and data transmission, offering a comprehensive range of optical fibres, optical and copper cables and connectivity systems. Prysmian is a public company, listed on the Italian Stock Exchange in the FTSE MIB index.
